

(U) Future capabilities

(S//SI//REL TO USA, FVEY) Currently, MHS still supplies about 99% of the FORNSAT data used in GHOSTHUNTER geolocations. But when necessary, the capability is available to use data from other FORNSAT sites to geolocate targets that are active within their respective footprints. The GHOSTHUNTER technique gives near-global coverage, but there are still some blind spots. [REDACTED]
